Common Parts of the SCCY CPX 2 and Their Functions

Breaking down the SCCY CPX 2 into its fundamental parts can make the diagram easier to understand. Here's a closer look at some of the most important components and their roles:

Slide and Barrel

The slide is a moving part that cycles back and forth with each shot. It ejects the spent casing and chambers a new round. The barrel, secured within the slide, directs the bullet's path and contains rifling to stabilize the bullet in flight.

Trigger and Hammer Mechanism

The SCCY CPX 2 uses a double-action-only (DAO) trigger system, meaning every pull both cocks and releases the hammer. The parts diagram shows the trigger bar, hammer, and sear working together to fire the pistol.

Recoil Spring Assembly

This spring absorbs the energy from the slide's rearward motion and pushes it forward again. It's essential for the cycling process and must be correctly installed for reliable function.

Magazine

The magazine holds the ammunition and feeds it into the chamber. The parts diagram may show the magazine follower, spring, and base plate, especially if you're looking at a comprehensive schematic.
