Using Filters and Search to Find Specific

Transactions

The Chase app doesn't just show a long list of transactions—it offers powerful tools to help you pinpoint exactly what you're looking for. If you want to narrow down your transaction history by date, merchant, or transaction type, the filtering features come in handy.

How to Use Filters Effectively

- Tap on the filter icon usually located near the top of the transaction list.
- Choose the date range you want to review. You can select preset options like "Last 30 days" or customize the start and end dates.
- Select transaction types such as purchases, payments, deposits, or transfers.
- Optionally, enter a merchant name or keyword in the search bar to find transactions related to specific vendors.

This filtering capability is especially useful when you want to reconcile your monthly budget or find an unexpected charge.

Downloading and Exporting Your Transaction History

Sometimes, viewing transactions on your phone isn't enough—perhaps you need a hard copy for tax purposes or want to analyze your spending on a spreadsheet. While the Chase app itself focuses on quick access and review, downloading or exporting transaction history typically requires logging into Chase's online banking via a web browser.

How to Export Transactions from Chase Online
