- The device should power on automatically via PoE.

If using a separate power supply:

- Connect the Ethernet cable for network data.
- Plug in the power adapter to the terminal and an electrical outlet.
- Verify the device powers on.

3. Initial Device Configuration

Once powered, the terminal will go through a boot-up sequence. Follow these steps:

- Access the device's settings menu directly on the touchscreen.
- Configure the IP address settings – either DHCP or static IP as per your network setup.
- Enter server information, including the Kronos server IP or hostname.
- Set date, time, and time zone accurately to avoid synchronization issues.

4. Enrolling Employees and Testing

With the device configured, the next step is to enroll employee credentials.

- Use the Kronos Workforce Central software to create employee profiles.
- At the terminal, guide employees through biometric enrollment (fingerprint scan) or card registration.
- Perform test punches to ensure clock-in/out data registers correctly in the system.

Tips for a Successful Kronos InTouch DX Installation

Even after following the steps, a few insights can help optimize your installation:

Ensure Network Stability

The terminal relies heavily on uninterrupted communication with the Kronos server. Using a wired Ethernet connection is preferred over Wi-Fi to minimize connectivity issues. Also, consider setting up Quality of Service (QoS) rules on your network to prioritize this traffic.

Keep Firmware Updated

Kronos periodically releases firmware updates that improve security, add features, or fix bugs. After initial setup, check for updates and install them as recommended.

Plan for User Training

Employees might be unfamiliar with biometric or card-based timekeeping. Brief training sessions or informational signage near the terminal can reduce errors and improve compliance.

Secure Physical Installation

To prevent tampering, mount the device securely and consider adding surveillance if theft or vandalism is a concern.

Troubleshooting Common Installation Challenges

Sometimes, things don't go as smoothly as planned. Here are common issues and how to address them:

Device Won't Power On

- Verify power source and cables.
- If using PoE, ensure the switch port supports PoE and is enabled.
- Try a different power outlet or adapter.

Network Connectivity Problems

- Check Ethernet cable integrity.
- Confirm IP configuration matches your network policies.
- Ping the Kronos server from the terminal if possible to test communication.

Employee Data Not Registering

- Recheck server settings on the device.
- Verify that employee profiles exist in the Kronos system.
- Ensure biometric devices are clean and functioning.

Incorrect Time or Date

- Adjust settings manually on the terminal or via the software.
- Synchronize with network time protocol (NTP) if supported.

Installing the Kronos InTouch DX is a straightforward process when you have a clear plan and understand the device's requirements.
