The game involves a hidden target located somewhere on a sliding scale between two opposite ideas—think “Hot” and “Cold” or “Romantic” and “Practical.” One player, the clue giver, provides a hint to guide their teammates toward guessing the approximate position of this target.

The fun lies in the ambiguity of the clues and how teammates interpret them based on their shared experiences and perspectives. This is why wavelength questions to ask game players often revolve around subjective, opinion-based topics that encourage players to think creatively and empathize with one another.

Thought-provoking and relatable questions encourage players to open up, sparking conversations that go beyond the game itself.

Good wavelength questions often strike a balance between being accessible and challenging, ensuring everyone can contribute while still making their guesses meaningful.
