Breaking Down Some Sample Answers from the 65 Puzzle

Time Answer Key

To illustrate how the 65 puzzle time answer key works, let's explore a few sample puzzles and their explanations.

Sample Puzzle 1: Clock Angle Problem

Question: What is the angle between the hour and minute hands at 3:15?

Answer Key Explanation:

At 3:15, the minute hand is at the 3 (or 90 degrees from 12). The hour hand at 3 o'clock is at 90 degrees, but at 3:15 it has moved a quarter of the way towards 4. Since each hour represents 30 degrees (360 degrees/12 hours), the hour hand moves 0.5 degrees per minute. Thus, at 15 minutes, it moves $15 \times 0.5 = 7.5$ degrees past 90, totaling 97.5 degrees. The angle between the hands is $|97.5 - 90| = 7.5$ degrees.

This detailed explanation helps you understand how to calculate angles at any given time.

Sample Puzzle 2: Elapsed Time Calculation

Question: A train leaves at 10:45 AM and arrives at 1:20 PM. How long is the journey?

Answer Key Explanation:

To find the duration, subtract the departure time from the arrival time.

1:20 PM = 13:20 in 24-hour format

13:20 - 10:45 = 2 hours and 35 minutes

Therefore, the journey lasts 2 hours and 35 minutes.

This kind of problem emphasizes the importance of converting time into a consistent format before calculating.
